

LK16 Ivatt Class 2 2-6-0

Shown with Romford/Markits wheels. Requires a Mashima MH1620 motor with GB1 or GB3 gearbox.

The Comet model of the popular 'Mickey Mouse' loco comprises whitemetal castings for the smokebox, boiler and firebox, to give the finished model haulage capacity, with etched brass used where that is necessary for the sake of appearance. The model can be built with a choice of two chimneys, and either strap or plate steps.
